

## **SUCTION DEVICE**

### **ABSTRACT OF THE DISCLOSURE**

A suction device includes a substrate having a plurality of apertures. In each  
5 of the apertures, an adjusting member is mounted. The adjusting member has a tube  
and a rim. The tube has a close inner end and an open outer end and the rim is  
projected from the tube and attached on a sidewall of the aperture. The tube has a gap  
between the inner end thereof and the rim so that air only flows through the aperture  
through the gap.
